

DYNAMICS *in* ENGINEERING STRUCTURES

Vladimír Koloušek, DSc.

Professor, Technical University, Prague

Edited by:

R. F. McLean, MSc, PhD, ARCST, C Eng, MIMechE
Senior Lecturer, Department of Dynamics and Control,
University of Strathclyde

and

J. F. Fleming, BSc
Lecturer, Department of Dynamics and Control,
University of Strathclyde

CONTENTS

Preface	7
Foreword	9
Notation	11
1 SYSTEMS WITH SEVERAL DEGREES OF FREEDOM	17
1.1 Introductory notes	17
1.2 Method of influence coefficients	19
1.3 Method of elasticity coefficients	32
1.4 Systems vibrating in several directions	43
1.5 Symmetry and cyclosymmetry of systems	46
1.6 Approximate methods	67
2 PRISMATIC BARS WITH UNIFORM MASS DISTRIBUTION	69
2.1 Method of influence coefficients; integral equations of motion	69
2.2 Differential equation of free lateral vibration of a uniform beam	71
2.3 Solution of the differential equation of free lateral vibration of a uniform beam	73
2.4 Moments and forces at the ends of a laterally vibrating bar	76
2.5 Longitudinal vibration	81
2.6 Torsional vibration	83
2.7 Lateral vibration of prismatic bars under an external harmonic load	85
2.8 Frequency functions	87
3 FRAME SYSTEMS COMPOSED OF PRISMATIC BARS	93
3.1 Application of the reciprocal theorem to systems with continuous mass distribution	93
3.2 Analysis of frame systems by the slope-deflection method	95
3.3 Simplified solution	119
3.4 The energy method	125
3.5 Modal analysis	132
3.6 Three-dimensional frame systems	138

4 SYSTEMS WITH NON-PRISMATIC MEMBERS	143
4.1 Straight bars of varying cross-section	143
4.2 Systems with bars of plane curvature	168
4.3 Systems with bars of skew curvature	181
5 CYCLOSMMETRIC SYSTEMS. SYSTEMS WITH REPEATED ELEMENTS	187
5.1 Three-dimensional cyclosymmetric systems	187
5.2 Continuous systems with repeated elements	205
6 SOME PROBLEMS OF DAMPED VIBRATION	263
6.1 Damped vibration of frame systems	263
6.2 A more general theory of damping	283
7 MOVING LOAD	305
7.1 Introductory notes	305
7.2 Dynamic effects on steel bridges with straight main girders of constant cross-section	305
7.3 Dynamic effects on reinforced concrete arch bridges	330
8 SECONDARY EFFECTS	351
8.1 Effect of shear deflection and rotatory inertia on lateral vibration	351
8.2 Effect of static axial force on lateral vibration	366
9 OTHER APPLICATIONS OF FREQUENCY FUNCTIONS $F(a, d)$	389
9.1 Transverse impact	389
9.2 Lateral vibration of plates	396
10 APPENDIX	407
10.1 Comprehensive tables of end moments and forces	407
10.2 Numerical tables of frequency functions	429
References	573
Index	577
